PRODUCTS

e-Government

Over the years FAAB Team has developed methods of bringing technologies, Applications and skills together to enable all tiers of public sectors to move towards electronic government, with the objective to become a world leader in its field.

Through partnering with Governments, FAAB Team has built customized solutions and helped create a combined Public-Private-Citizen infrastructure that provides a single-point of contact for the citizens and businesses to interact with the Government.

FAAB understands that e-Government is not just about technology and electronic service delivery; it is about using security, legislation, information and communication technologies to improve the delivery, quality and accessibility of public services built around the needs of the citizens and clients.

FAAB's e-Government framework encompasses the following e-Services:

- e-Access
- e-Documents
- e-Forms
- Workflow Management
- e-Payment
- Additional e-Services

Portals

FAAB team's profound industry expertise along with their technical capabilities has allowed it to develop industry-specific bilingual portals to serve the vertical markets. Portals developed by FAAB team, act as a source for information for online access. They also encompass and link services of all concerned entities providing online-users with a "one-stop" information and services portal. FAAB customized portals facilitate the interaction between the various entities involved through online transactions and electronic services. The Portal provides up-to-date technologies in a single platform and hosts different applications for different user profiles integrated in one central website.

Transactions can be accomplished much more quickly with no barriers to the "same time" "same place" concept. This will lead to improved service and client satisfaction.

The following are some characteristics of the FAAB portals:

- Business to Business (B2B)
- Business to Customer (B2C)
- Government to Government (G2G)
- Government to Citizen (G2C)
- Government to Business (G2B)
- Government to Employees (G2E)
- End to End Business Process

Security Solutions

FAAB suite of security access systems includes authentication, authorization and audits. It also incorporates additional measures such as physical devices, including biometric scans and metal locks, hidden paths, encryption and monitoring by humans and automated systems.

Physical Security

e-Gates	CCTV	Access Control
Through partnerships with world renowned providers of e-gate technology, FAAB specializes in entrance control systems offering customized solutions for a large number of required locations. FAAB can optimize your security needs with Turnstiles, Entrance Gates, Speed Gates, Revolving Security Doors and Immigration Security Gates.	FAAB CCTV Solutions combine the value and versatility of digital technology with the power of actionable intelligence. Interfacing with your access control systems, FAAB Video Solutions can spot unauthorized or multiple persons passing through a secure doorway, associate these events with identification information from government security cards, and issue alarms to the appropriate personnel for rapid action.	FAAB access control solutions for business entities provides range of security options. Our products include perimeter control, vehicle barriers, facial recognition, biometric verification and many more.

Documents Security

The secure document issuing process from FAAB is amongst the most sophisticated and robust systems available today. Conforming to ICAO standards, FAAB can create the most advanced secure document issuance environment to provide complete solutions under one roof, operating around the world, managed and supported by a dedicated team of professionals.

FAAB experience in security printing ensures First-to-Market features like high quality digital data printing incorporating 2D barcode, biometrics, UV photo imprints, encrypted authentication key, to name a few. Backed by expertise in project management and system integration, the secure document issuance services include:

• Machine readable travel documents (passports, visas, ID's)
• ID cards (governments, public authorities, business enterprises)
• Certificates (citizenship, land registry, etc…)
• Security Printing

Computer Security

FAAB control systems provide the essential services required for identification, authentication, authorization, and accountability. Identification and authentication determine who can log on to the system, authorization determines what an authenticated user can do, and accountability identifies what a user did.

• e-Access – e-Tokens, Tokens, Smart Cards
• Public Key Infrastructure (PKI)
• Certificate Authority (CA)
